Due April 27th at 5:30 pm – Final Project Writeup and Visualization

Final Writeup – 5 points

Can be submitted in a single document or separate files (PDFs only)

Midterm Proposal Outline Update – 1 point

Originally submitted Midterm Proposal outline and instructor and peer feedback, with notes describing changes made to the proposal after its submission.

Criteria for earning these points:

- Includes the original proposal outline.
- Includes the instructor's feedback and, if applicable, descriptions of any changes made to address that feedback.
- Includes description of changes made to the original proposal AND explains the reasons for any changes made.

Summary / Visualization Access – 1 point

Write a brief explanation of the story your visualization tells and the key results you found in the data that can be explored in your visualizations. Write this description as your abstract / book jacket summary for a college-educated general public (who may not be in your target audience). Explain how one should access and engage with the visualization (e.g. where to start, how to interact / explore).

Criteria for earning these points:

- The explanation of the results is clear.
- The explanation for how to access the visualization is clear. If the visualization is to be viewed locally, clear instructions are provided for the inclusion / installation of any required libraries, etc. Note: this requirement is a prerequisite for one to earn any of the 15 visualization points described in the next major section.
- The explanation for how to experience / explore / interact with the visualization is clear.

Challenges Encountered and Addressed – 1 point

Describe the technical challenges you faced in completing the project and how you addressed those challenges. Topics addressed may include, but are not limited to, data collection, data cleaning, linking data sets, data size issues, inclusion of libraries, etc.

Criteria for earning these points

- Section contains at least one paragraph.
- Challenges encountered are described.
- Work completed to address any challenges is clear.

Design Decisions – 1 point

Explain the design choices you made in the creation of your visualization. For example, why did you choose a particular type of chart over other options that could be used to display the same data? Why did you choose a particular color scheme? How did you decide on the interactions available for the viewer?

Criteria for earning these points

- Includes descriptions of multiple visualization options, design options, and options for interactive elements.
- Lists include options that are not a part of your final product.
- Clear reasons are be provided for the choices made.

Discussion of Future Work – 1 point

Describe how the work you've done on this project could be extended.

Criteria for earning these points

- Section contains at least one complete paragraph of text.
- Includes at least one idea for a new visualization (a visualization that couldn't easily have been added to your project) and/or additional data one could collect and include to further inform and engage your intended audience.

The Visualizations – 21 points

Complexity - 4 points

Appropriate Interactivity - 4 points

Visual Appeal / Design - 4 points

Ease of Use - 4 points

Cohesive Story - 4 points

See the rubric for these categories on the next two pages. Note: must include use of Tableau, R, Python, or JavaScript in order to be eligible for any of these points.

Link to the visualization is also posted on the bulletin board in Blackboard for your classmates to view - 1 point

	4 points	3 points	2 points	1 point
Complexity	Visualizations included are appropriately complex and demonstrate mastery of the visualization tools used beyond the proficiency required in completion of the course homework assignments. OR Extensive data gathering / cleaning / preparation techniques documented resulted in a new, pristine dataset. All visualizations demonstrated proficiency with the visualization tools at the level required for the course homework assignments.	All visualizations demonstrated proficiency with the visualization tools at the level required for the course homework assignments. All elements are clearly labelled. Missing data is filtered or appropriately interpolated and documented.	Visualizations included demonstrate proficiency with the visualization tools at the level required in the course homework assignments. Minor elements are missing that one would expect for the charts used (e.g., a chart is improperly labelled) and/or data is not appropriately cleaned or filtered to create meaningful visualizations.	Visualizations are simple charts that are missing important elements or charts used are inappropriate for the data visualized.
Appropriate Interactivity	The interactive elements included are appropriate and aid in the exploration and understanding of the visualizations.	Some appropriate interactive elements are included. One or two interactive elements that would be helpful to explore and understand the visualizations are missing. OR One or two interactive elements included detract from the viewer's understanding of the visualization.	Minimal interactive elements are included. Several interactive elements that would be helpful to explore and understand the visualization are missing. OR Several interactive elements included are inappropriate for the visualization.	No interactive elements are included.
Visual Appeal / Design	Design choices made are appropriate for the topic and aid in the understanding of the visualizations.	Most of the design choices are appropriate. One or two improvements could be made to aid the viewer's understanding of the visualizations.	Many of the design choices are appropriate. Several improvements could be made to aid the viewer's understanding of the visualizations.	Design choices made are inappropriate and detract from the viewer's understanding of the visualizations.

	4 points	3 points	2 points	1 point
Ease of Use	Exploration of the visualizations is intuitive and/or the viewer is provided ample instruction explaining how to view the visualization.	The instructions provided are helpful but lack one or more important bits of information. The viewer can explore the visualizations with some trial and error.	Important, necessary instructions for viewing the visualizations are not provided. The viewer is left to explore the visualizations through trial and error.	The visualizations are inaccessible, or it is unclear how one should view the visualizations.
Cohesive Story	The visualizations guide the target audience through a compelling, cohesive story that the viewer can explore in a meaningful way. Appropriate context is provided (e.g., text or external links) for the viewer to understand the story.	The visualizations guide the user through a story. Additional context or data is missing to provide the target audience the means to draw conclusions from the visualizations.	Disjoint visualizations are provided that fall under a common theme, but no cohesive story is evident.	Visualizations included seem unrelated and do not contribute to a cohesive story.
